

Relationship Between Measures – Assignment

**Basic**

We've already invested quite a lot of time in the IMDB dataset, but I'm still interested in the relationship between certain measures. Is there a relationship between the amount of Facebook movie likes and the gross income for a movie?

Try to find out by creating the following visualization:

- Show the relationship between **movie Facebook likes** and **gross** amount for **each movie title**. The color and size is determined by the **budget** each movie had. Don't forget about the following:
  - Add a border to your marks. Preferably a light color
  - Show the **content rating** and the **director name** for each movie in the tooltip
  - Make the **content rating** and **director name** available as a highlighter on the right side

1. # Facebook likes &amp; Gross Amount
